The setup package is about 4.38 MB (4,184,432 bytes) when downloaded. How to Choose Hand Sanitizer Hand sanitizer is a must have when visiting a public place like a hotel, restaurant, or hospital. Using hand sanitizer gives you the ability to prevent bacteria from spreading from your hands to surfaces like toilet bowls and counter tops, as well as preventing your hands from coming into direct contact with germs and harmful bacteria that may be on other surfaces. Before getting to a public place, make sure you have enough hand sanitizer to get you through the day. Store the sanitizer in a hand sanitizer dispenser so that it's easier to use and you won't need to worry about carrying it with you. If you only plan to be in a public place for a short period of time, you can get away with just using a small bottle of hand sanitizer. However, if you plan to be there for an extended period of time, a larger bottle of hand sanitizer will be best. Does Hand Sanitizer Work? The amount of hand sanitizer you need depends on what public place you will be visiting. For example, in a hotel, you will need a lot more hand sanitizer than you will in a restaurant. The reason for this is that if you have a hotel that is multi-floored, you will have to clean the hand sanitizer and your hands as you go up the stairs. If you only need to sanitize your hands in a single public place, then you can use a smaller bottle of hand sanitizer. Hand sanitizer needs to be alcohol based, so do not use dish soap as it won't work. In the case of dish soap, the alcohol won't kill the germs, so you can get a hand sanitizer that is already alcohol based. If you are unsure about what kind of hand sanitizer you need, check the ingredients to see which one has the highest alcohol content, which is usually denatured alcohol. What Is Hand Sanitizer Made Of? In the United States, hand sanitizer usually contains 70% alcohol, although other countries like Australia and Canada have hand sanitizer that contains alcohol of up to 96%. Hand sanitizer that is lower in alcohol has the ability to leave a residue on your hands that can cause 82157476af
